🌟 Full-Stack Engineer

Location: Remote
Type: Internship, Full-time or Part-time
Start Date: TBD
Company: [Solarity AI LLC](#) – Dallas, Texas, USA

🚀 About the Role

We are looking for a motivated **Full-Stack Developer** who is passionate about building modern mobile applications. You will work closely with our engineering team to design, develop, and deliver features across our backend (Java/Spring Boot) and mobile front-end (JavaScript/React Native).

If you love shipping real features, touching both backend and mobile, and learning faster than YouTube tutorials can upload, you'll feel *very* at home here.

This is NOT a coffee-runner role.

This role offers **real code, real impact, real ownership** inside a very fast-moving AI company.

🧠 What You'll Work On

- Developing backend APIs using **Java, Spring Boot**, and RESTful design
- Building mobile features and screens using **React Native**
- Participating in code reviews, testing, and debugging across the stack
- Integrating with database (PostgreSQL)
- Working with real-time features, push notifications, and modern mobile UX patterns
- Collaborating with senior and lead engineers on architecture decisions and deployments
- Using CI/CD tools, version control (GitHub), and Agile workflows
- Helping improve code quality, documentation, and internal tools
- Ship code that real users actually touch

🎯 What We're Looking For

- Basic understanding of **Java** (OOP, REST APIs, Spring Boot familiarity is a plus)
- Familiarity with **JavaScript/TypeScript** (**React Native** familiarity is a plus)
- Experience with DBMS
- Knowledge of Git and experience working on personal or school projects
- Curiosity about cloud platforms (AWS)
- ***Strong problem-solving skills and willingness to learn***
- Ability to work independently and ask questions when needed

---

📚 What You Will Gain

- Real-world full-stack experience with modern technologies
- Mentorship from senior and lead software engineers
- Experience in mobile development, backend development, and cloud deployments
- Exposure to DevOps, CI/CD pipelines, containerization, and testing practices
- A portfolio of production-level contributions that make an impact
- A portfolio full of "I actually built this" screenshots

📌 You're Perfect For This If You…

- Know some **Java** and have written at least one REST API (or tried)
- Have touched **React Native** or React even small personal apps count
- Use Git without fear
- Love cracking tough problems, Googling like an absolute champ, and squeezing every drop of value out of AI tools.
- Want an role where you actually grow, build, break, fix, and ship

---

💥 We Don't Care About:

❌ Fancy resumes
❌ Perfect GPA
❌ Knowing every keyword on StackOverflow

We care about **curiosity, effort, and the spark to build things.**

💼 Requirements

- Currently pursuing or completed a degree in Computer Science, Software Engineering, or similar
- Able to commit **at least 20 hours per week**

📩 How to Apply

Send us:

- Your **resume (it should be written in LaTeX using [this format](#)**)
- Your LinkedIn profile
- Links to GitHub projects or mobile apps
- A short note on why you're excited about Spring Boot + React Native
